PB SwissGrip®

PB SwissGrip® screwdrivers with their soft handle surface effortlessly transfer the rotational forces of the hand to the screw. They are particularly appreciated in places where problem-free, non-tiring work is a requirement, in the high-tech sector, on assembly lines or DIY. The casing which is made of skin friendly Santoprene®, gives a soft, warm feel to the handle. It encloses the entire surface of the handle and therefore guarantees the best possible contact between the skin and the soft component. The special structure means that a secure grip is ensured even if hands are wet.

Fluke 1625-2 and 1623-2 Geo Earth Ground Testers

Simpler, faster testing

Grounding testers, like the Fluke 1623-2 and 1625-2, help maintain uptime and lower the risk of electric shock to users while helping solve intermittent power quality problems. The Fluke earth ground testers perform all four essential earth ground test methods that users demand:

3- and 4-pole Fall of Potential, earth resistance loop testing

4-pole soil resistivity testing

Selective earth ground testing using one clamp

Stakeless earth ground testing using two clamps

The 1623-2 and 1625-2 also make earth grounding tests faster and easier than previous methods because of automatic data collection and storage and faster setup. Color coded wires for easier identification and deploying of wire reels and stakes.

IP56 rated for outdoor use

USB data storage and transfer

Automatic Frequency Control (AFC) identifies existing interference and chooses a measurement frequency to minimize its effect, providing more accurate earth ground value

R* measurement calculates earth ground impedance at 55 Hz to more accurately reflect the earth ground resistance that a fault-to-earth ground would see

Adjustable limits for quicker testing

Faster setup, easier testing and deployment of wire reels and stakes.

Clamp-on transformer accessory for ground loop measurements on transmission pylons.

VISUAL IR THERMOMETERS

Fluke VT04/VT04A Visual IR Thermometer

Designed to see it all

See issues in context by blending the infrared heat map with a visual image, and get the detail you need by choosing one of five on-screen blending modes . See aligned images from as close as 15 cm (6 in) in near mode or from a distance in far mode . Plus, obtain accurate temperature readings without taking your eyes off the screen . The center measurement box shows the exact area of temperature measurement . Fill that center box with your target and rest assured you're not measuring the background.

Identify intermittent problems by monitoring equipment over time or get alerts when a temperature is outside the expected range with temperature alarms and automated monitoring features

Instantly identify the hottest and coldest spots within the field of view with hot and cold markers

Handy when you need it; easily fits in your tool bag or pocket

Intuitive enough to use right out of the box

Easily access saved images with the removable SD card

Save in .bmp format when you only want the image, or choose .is2 format so you can optimize images and create reports with Fluke SmartView[®] software, available by free download from Fluke.com

An Arc Flash suit consists of the following products

- *ARC Flash Hood
- *ARC Flash Jacket
- *ARC Trousers
- *ARC Flash gloves
- *Protective boots

The ARC Flash categories range from
*8 CAL to 100 CAL

Safety is always a first priority in electrical engineering. The preservation of life is imperative. Arc Flash suits are a small cost in comparison to the loss in quality of life if a worker is exposed to an electric arc event. Electrical technicians, by law should always wear and be properly trained in the safe use and application of Arc Flash suits and appropriate personal protective equipment such as insulated rescue sticks for the possible electrical hazard with which they may face.
